

For central heating systems and under floor circuits Hot Water System - Disinfectant

BM7 is a highly effective biocide specifically formulated for microbial growth control over a wide spectrum of bacteria and other micro-organisms, found in waters.

BM7 penetrates microbial biomass and facilitating bio-fouling removal from surfaces with a high effective biocide action.

- Effective biocide and fungicide
- Removes bacterial and fungal biofilms
- Suitable for central heating systems including underfloor
- Ensures clean and efficient system operation

BM7 should be dosed at 0.5 % of system volume (0.5 litres treats 100 litres of system water). A 500 ml bottle of BM7 contains sufficient treatment for a typical heating system with domestic hot water cylinder and up to ten radiators. BM7 can be used in the systems already treated with BM1, corrosion inhibitor and anti-scale chemical for heating system treatments.

Use biocides safely. Always read the label and product information/instructions before use.
